Worley Group

# It's waterRIDE, but on the cloud

**Share flood information as widely as you need to. Work from home with full waterRIDE™ functionality. And provide the best flood resiliency for your community and business anywhere, at anytime.**

## **We provide flood solutions**

waterRIDE™ is part of Advisian Digital's suite of sustainability, resilience and mitigation products, built to help communities and businesses plan for and manage flood events. For over 15 years, it has helped more than 250 organizations across government, insurance, and energy and resources understand the impacts of a flood without needing to be a flood modeler.

The beauty of waterRIDE™ is in its simplicity. It allows users to not only understand which areas will be inundated and when, but what assets and infrastructure will be impacted.

Now we're taking waterRIDE™ a step further with waterRIDE™ CLOUD. To help you address the critical issue of flood data management and distribution. And to provide better flood resiliency wherever you choose to work.

# What's new?

## Store data on the cloud

Previous waterRIDE™ products have been run on desktops, with the data housed on corporate networks. But with waterRIDE™ CLOUD, flood data is stored centrally on the cloud, making it easy to access and distribute information externally, if desired.

## Share flood information with anyone

Flood information and insights can be readily shared with stakeholders both inside and outside of the organization. This can create a more resilient and agile flood management system and better communication.

## Access waterRIDE™ anywhere, anytime

Being on the cloud means that you can access waterRIDE™ from wherever you are. Whether you're in the office, working from home or traveling, access and use your flood information by simply opening up your browser and logging into the platform.

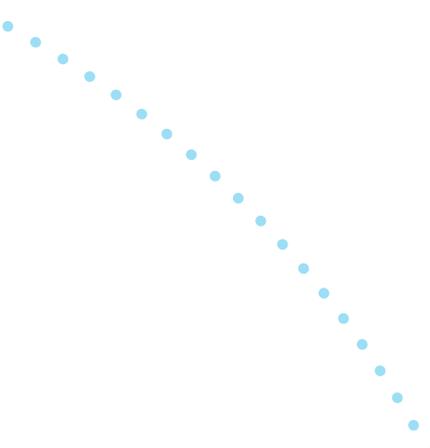

## Keep track of changing datasets

Either manage your data yourself, or we can do it for you with our new Data Manager feature. All we need is to know when a new flood study has been completed and a link to the datasets. We then provide an automatic notification for when the updates are available on waterRIDE™ CLOUD.

## Like you, the way we work has changed

Now you can work from home and still manage your flood data with waterRIDE™ CLOUD.

**In today's climate, we all need the flexibility to work remotely. We've responded by taking our waterRIDE™ tool to the cloud.**
